

MyScript Studio

With MyScript Studio, store, find, convert and share your notes!

MyScript Studio is a product range developed by Vision Objects to **manage and process handwritten notes**.

MyScript Studio still includes the features that made MyScript Notes so renowned: the high recognition accuracy rate for text, graphics and diagrams, the wide language coverage, the possibility to create a personalized writing profile, etc.

MyScript Studio will quickly become an essential tool for the effective and personalized management of your digital notes!

FEATURES

+ Document management

Manage your handwritten notes!

MyScript Studio detects and retrieves incoming handwritten notes downloaded from a pen or other digital device and stores them instantly in a default folder on your PC. You can then **classify** your notes by tagging and arranging them by subjects, keywords, themes, etc.

Different views: pages can be displayed by thumbnails or list. You can also have a book view of your Anoto notebooks so that you can browse like in a real notebook

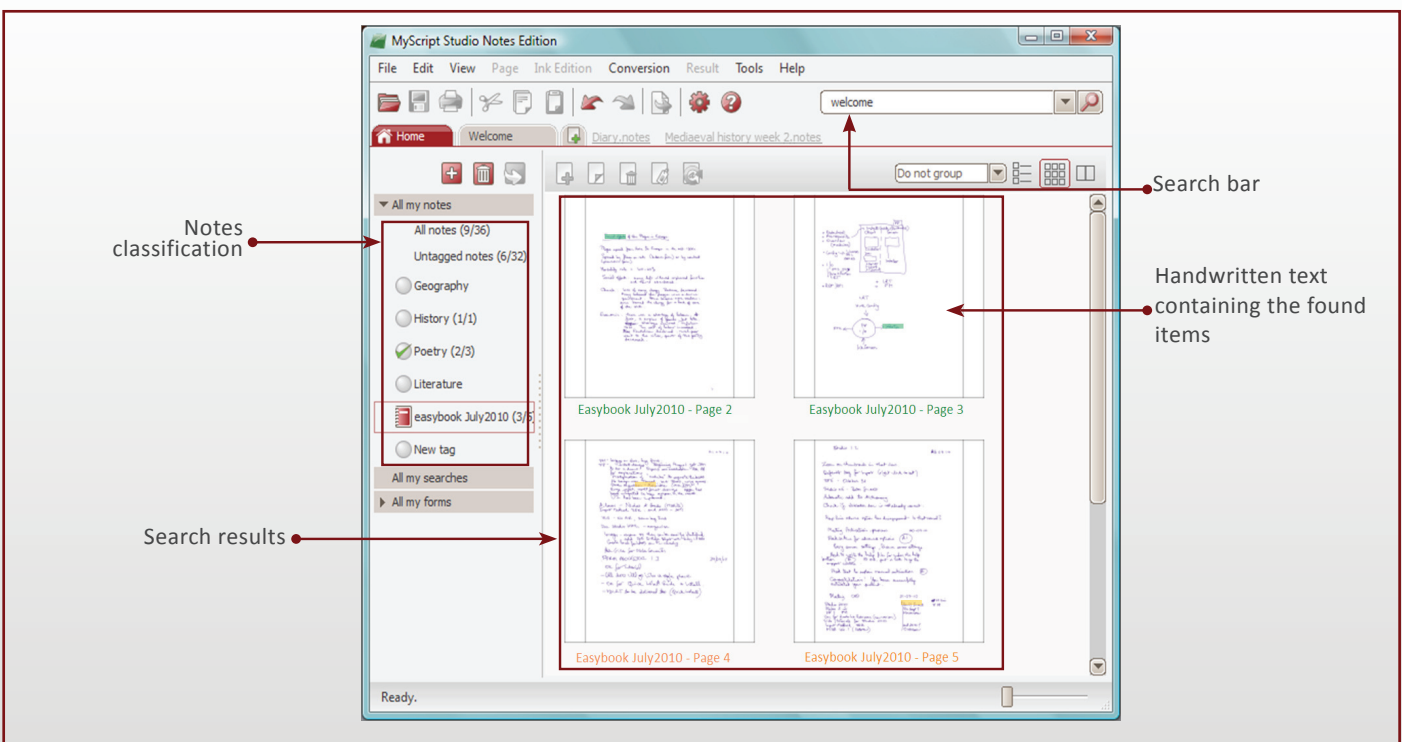

+ Search engine

Find instantly the information you are looking for!

You are looking for specific information, but you do not know where to find it within your notes? No worries, a search function is totally integrated in the application. No more need to glance through your notes one by one, with MyScript Studio you can **make searches by simply typing keywords to find information in your handwritten notes**, without using handwriting recognition before, saving precious time!

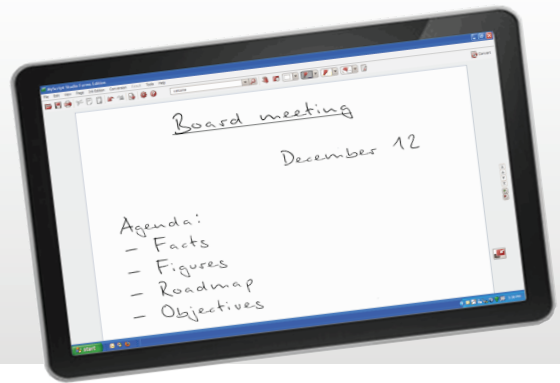

The search results quickly display the pages which contain the information you are looking for and its location. The most pertinent results are displayed at the top of the list.

With MyScript Studio, notes are not just archived but they become an active part of your everyday life!

✔ Note taking & text edition

Users can import notes taken with a digital pen, a graphic tablet or a tablet PC, but they can also create documents directly inside the application. Using the full screen mode, users can write and adjust, select or edit the text with editing tools.

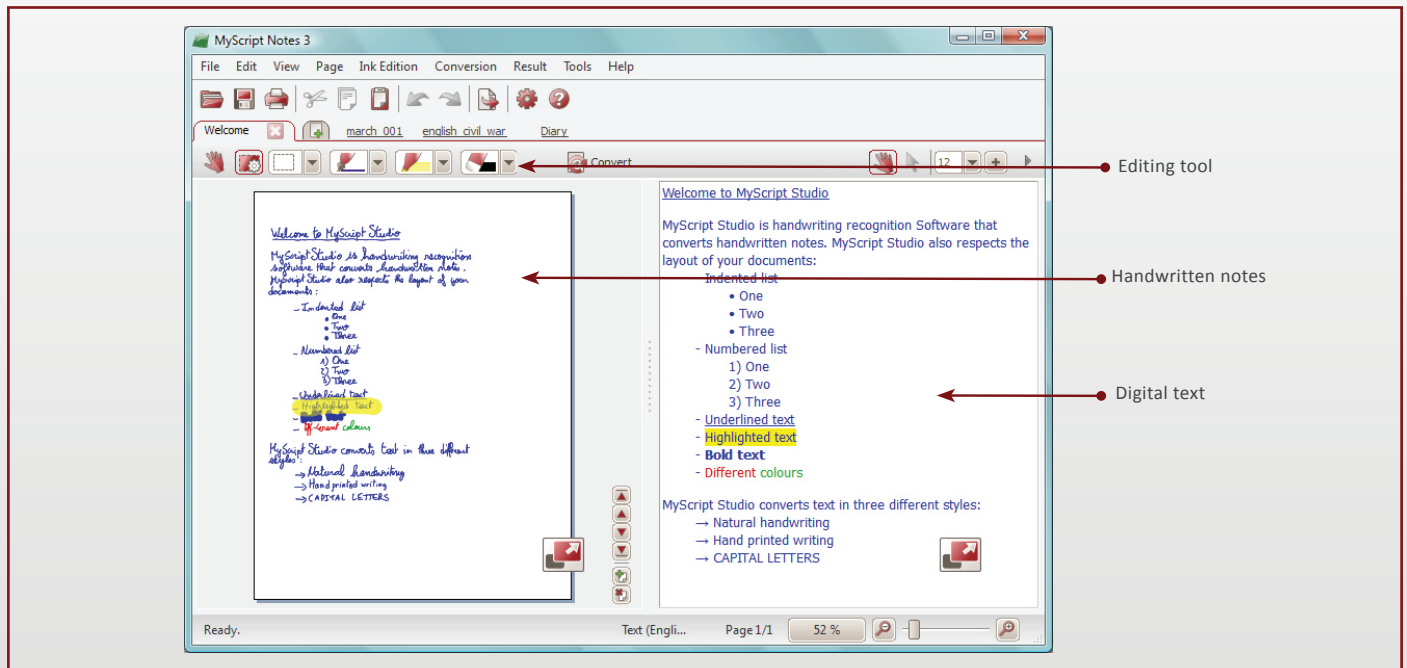

✔ Handwriting recognition

Select, convert and edit!

Don't retype your handwritten notes anymore. MyScript Studio Notes Edition does it for you! If needed, you can **edit your digital ink before conversion** in order to perfect your notes: delete information you do not need, remove unsightly corrections or add text and shapes.

All kinds of handwritten notes - text, drawings, indented lists, tables, etc. - **are converted to digital text** directly in the application window. Then, the result can be sent to word processors, to a text editor or to your default e-mail application to share it with others.

To convert your handwritten notes, Select the page you want to convert or a part of it, then click on a button and your digital text is ready! You can now freely modify or format your document (such as add bold, italics, underlining, change the text size and color, make lists, etc).

Based on the MyScript Builder handwriting recognition engine, MyScript Studio Notes Edition features unprecedented handwriting recognition accuracy in **28 languages**. Tested on hundreds of handwriting samples from writers worldwide, MyScript technology takes into account the alphabet, vocabulary and country specific handwriting styles, for accurate conversion into text.

✔ Trainer module

Create your own writing profile with the Trainer module!

With this functionality you can **create a personal writing profile based on your own writing**. This module helps people whose writing style differs from the average to convert their notes with the best possible accuracy rate.

DISCOVER OUR OFFER

MyScript Studio is available as different packages described below. It is usually delivered with one Language Pack, all the other language packs available can be downloaded on the Vision Objects Webstore.

FEATURES AT A GLANCE

✓ Handwriting recognition

- **Converts handwritten text**, diagrams and tables,
- Closely follows the original layout of the handwritten document,
- **Features full ink editing capabilities:** edit or delete, copy and paste part of your notes, apply highlighting, change the ink color or thickness,
- **Converts an entire document or just a part of it** (such as an isolated drawing, notes in another language),
- Apply **rich text** formatting to converted text straight in the application: underlining, bold, italic, text colors, alignment, bullets and numbers etc.,
- Saves the original handwritten document, the conversion result and possible modifications into one single file to keep a clear history of your notes,
- Contains a **personal dictionary** to add words and abbreviations,
- Includes automatic replacements for abbreviations and acronyms.

Exports to:

- Word processors, such as Microsoft™ Word, Ichitaro, Open Office, and others,
- Image applications (.jpeg, .png, .svg, etc.),
- E-mail clients, such as Microsoft™ Outlook, Thunderbird, and others,
- Text editors in plain text format, such as Notepad.

✓ Note taking & text edition

- Full screen mode
- **Editing tools:** highlighter, eraser, selecting tool.

✓ Document management

- Accepts a wide variety of file formats from many types of devices (digital pens, note pads, graphic tablet, tablet PCs, etc.),
- **Detects and retrieves** incoming handwritten notes downloaded from a pen or other device and stores them instantly in a default folder,
- **View and sort** handwritten notes in one place,
- **Assign tags** to classify your notes by subjects, keywords, themes etc.

✓ Search engine

- **Find information directly in your handwritten notes** by simply typing words into the search bar; pages containing the relevant information will be displayed and results will be sorted by relevance.
